Title: Between Frege and Peirce: Josiah Royce's Structural Logicism

Year: 2010

Journal: Transactions of the Charles S. Peirce Society

Volume: 46

Issue: 2

Pages: 155-177

Keywords: Josiah Royce, Gottlob Frege, Logicism, Alfred Bray Kempe

Abstract: The article discusses the little-known thought of 19th- and early 20th-century U.S. philosopher Josiah Royce (1855-1916) pertaining to logicism, the theory that mathematics is an extension of logic. Royce's views are distinguished from those of German mathematician Gottlob Frege, considered one of the founders of logicism, and compared to those of fellow U.S. philosopher Charles S. Peirce and British mathematician A. B. Kempe. Royce's version of logicism is termed by the author "structural logicism."
