Title: E-type Interpretation without E-type Pronoun: How Peirce's Graphs Capture the Uniqueness Implication of Donkey Pronouns in Discourse Anaphora

Year: 2013

Journal: Synthese

Keywords: Donkey Pronouns, Bound variable, Uniqueness, Definite descriptions, Existential Graphs, Transformation rules

Abstract: In this essay, we propose that Peirce's Existential Graphs can derive the desired uniqueness implication (or in a weaker claim, the definite description readings) of donkey pronouns in conjunctive discourse (A man walks in the park. He whistles), without postulating a separate category of E-type pronouns.
