Abstract: In this essay I critique the identification of contingency with sheer arbitrary possibility in Quentin Meillassoux's *After Finitude: An Essay on the Necessity of Contingency*. After offering logical and metaphysical reasons for why such an identification is a limitation on the speculative potential of reason, I draw upon Charles S. Peirce, Gilles Deleuze, and Giambattista Vico to articulate the outlines of a view of contingency which can underwrite a different speculative position to one that is grounded upon an absolute of unreason. This form of speculation, a realism of contingency without an axiom of unreason, is indicated in outline by the structure of divination practices. I thus propose, without defending its actuality, at least the possibility of a divinatory form of speculation that is adequate to the absolute status of contingency.
