Term: Secondness

Secondness is that mode or element of being by which any subject is such as it Quote:

> is in a second subject regardless of any third; or rather, the category is the leading and characteristic element in this definition, which is prominent in the ideas of dyadic relativity or relation, action, effort, existence, individuality, opposition, negation, dependence, blind force. Secondness has two grades, the genuine and the degenerate (just as a pair of rays is called a "degenerate" conic) and this is true in several ways. Every genuine secondness has two correlative aspects, of which one is more active or first, the other more passive or second; and these two together make a total secondness between two

correlative subjects.
