Term: Maxim of Pragmatism

...the principle he called *pragmatism*, that is, that every concept (in contrast to Quote:

> qualities of feeling, images, experiences, etc.) is definable in terms of a possible purpose of conduct under hypothetical general conditions, and that from this can be deduced the best rule for rendering ideas clear, namely, "Consider what effects that might conceivably have practical bearings we conceive the object of our conception to have: then, our concept of those effects is the whole concept in question." But since P not only admits the difference between a commensurable and an incommensurable length, but has specially insisted upon abnumerable (abzählbar) multitudes [...] it is evident that he understands

"conceivably practical bearings" in a peculiarly wide sense.
