'Argument' (pub. 21.08.17-09:01). Quote in M. Bergman & S. Paavola (Eds.), *The Commens Dictionary: Peirce's Terms in His Own Words. New Edition*. Retrieved from http://www.commens.org/dictionary/entry/quote-foundations-mathematics-r-3.

Term: Argument

Quote: A sign is also intended to determine, in a mind or elsewhere, a sign of the same

object; and this *interpretant* of the sign may be the very sign itself; but as a general rule it will be different. It is a perfection in a sign separately to signify its intended interpretant. If it does this, it becomes and *argumention* or *argument*. (Some pedants insist on the former word; but the very best usage

supports the latter.)
